

Gentlemen,

XM Radio has been an important innovation in communications. It has brought me back to listening to the radio. There are a number things that are important to me about XM Radio but perhaps the most important is the ability to get reception in areas where there is little or no reception such as on Rte 93 north of Concord, NH.

Adding weather and traffic information which is available in these areas would be very valuable. It is also an area where existing broadcasting has neglected to the detriment of the consumer.
